SoftPlus AutoRun Creator is a straightforward piece of software that lets you easily put together autorun menus for CDs and DVDs. It generates all the required files for the job on its own with minimal user assistance, and the resulted autorun menu can be immediately burned onto the correspondent disc. Fast setup and simple GUI The installation operation is a fast and easy job that shouldn't impose any difficulties. SoftPlus AutoRun Creator is packed in a user-friendly interface, represented by a simple window with a plain-looking structure, where you can pick a base folder to automatically scan, and choose the directory levels to take into account. Automatically scan directories to build autorun menus The app quickly identifies the folders and shows the containing files for each selected entry from the list. Pictures and icons can be previewed in a small frame built into the primary panel. It is possible to save the list of folders to file and import it later, as well as to build and save the new autorun menu after assigning an icon file. There are no other noteworthy options provided by this piece of software. Evaluation and conclusion We have not come across any stability problems in our evaluation, since SoftPlus AutoRun Creator did not freeze, crash or pop up error messages. It had a good response time, quickly built autorun menus and ran on a low amount of CPU and RAM, so it didn't affect the overall performance of the machine. On the other hand, SoftPlus AutoRun Creator comes loaded with limited features when taking into account the price of the full package. Other than that, it delivers a fast and straightforward solution for building autorun menus for CDs and DVDs, and it can be handled by all kinds of users, even those with minimal experience in this type of software. Tired of the same, same, same old, over and over again applications? Open-source developers have created new and exciting software that you can use, download, and install in just a couple of steps! DriveCADDIE is a specialized application for designing AutoRun CDs for Windows and Linux systems. The original version of DriveCADDIE was designed with CD authors in mind, and in order to support the development of custom AutoRun CD media, the open-source version of the software was renamed to OpenCDADDIE. SoftPlus AutoRun Creator Crack+ [Win/Mac]

KeyMacro is a popular application for creating macros (short text-based commands that automate repetitive tasks) for Microsoft Windows. The basic functionality is similar to that of simple text editors, letting you create and edit text files. The interface and basic functionality of KeyMacro are straightforward and intuitive, which makes the application very easy to use. The application can be used as a keyboard shortcut creator, and it offers a few handy extras, such as indent/unindent, tabify, and the insertion of customizable strings. KeyMacro can export the created macros to Excel spreadsheets, as well as directly to a.bat file. The latter option makes it possible to automate tasks that normally require the use of an external command-line shell. The program can also be used to create macros that can be activated directly from your text editor, so that it will be available as a keyboard shortcut. Technical information KeyMacro consists of a simple and intuitive GUI, with a single window and tabs for the macro and tools sections. The application is compatible with Windows 10, 8, 7, and XP, and it can be used in all languages. The main macro editor panel is

divided into a main toolbar, tabs for macros and tools, the macro editor panel, and the output panel. In the main toolbar, you can choose the files or folders to scan for macros (or add them directly), activate the macro editor and add/remove commands, edit the text of the commands, adjust the hotkeys for the key mappings, and duplicate and delete macros. The tabs at the top of the macro editor window can be used to filter macros, indent/unindent macros, get information about a macro, and print it. Each tab contains a corresponding set of icons that represent the functionality of the respective tabs. The macro editor panel lets you edit the text of your macros, and it contains a search box, a menu for the left of the text, buttons for the right, and the highlight of selected text. There is a clear indicator showing how many lines in the macro are currently selected, as well as a "folding" button that will hide lines that aren't related to the current macro. There are three tools included: the "replace" tool, the "combo" tool, and the "log" tool. The replace tool lets you replace a portion of text (or pattern) with another text in the selected text. For example, the string [B]{jones} 2edc1e01e8
