Lightroom is a powerful piece of software. The app lets you create high-quality images in a relatively short time. There are some missing features, but for the most part, it's a fantastic piece of software you can trust. The app works in a much simpler way than Photoshop, so you can easily master it. However, Lightroom has a lot of features that are not available in other apps, so it may be worth spending some time learning the basics. You will be referring to this Facebook page often, and if you do not plan to use any paid feature in Lightroom, there is no reason to subscribe to the ad-free plan. But if you do wish to dive in deep, you surely will like it. You'll enjoy the power of Lightroom, and you'll soon learn what to do with any workflow and how to use Lightroom as a powerful tool in specialized areas, such as retouching a landscape image. Automatic RAW conversion is a fresh concept. The app has features that automatically analyze the content of a RAW file to decide whether the camera sensor has all the regular values. In case of a successful RAW conversion without a recompressed TIFF file, the source RAW file is untouched. Otherwise, you will be presented with the settings for RAW conversion, which is an enormous benefit in that situations where you are not as sure about what you are buying. It keeps you from buying defective items. In addition, storage of the camera settings for every camera RAW file is no longer the job of NAPP Camera RAW. This is an improvement that will make your work more accurate.
