sony dcr hxd65 x86 manual Sake no Hibi no Yukakaze itsaassasu demo version (.exe) . How to download files from the internet to the disk?Optical attenuators are used in optical systems, including optical fiber systems, to attenuate light propagating therethrough. Optical attenuators are used for a number of different purposes, including attenuating the light signal to compensate for losses in the optical fibers, attenuating the light signal by controlled loss, attenuating the light signal in order to reduce the amount of optical power propagating through the fiber, and the like. Known optical attenuators generally include a plate disposed within the light path that attenuates the light beam by absorption of the light. That is, when light is incident on the plate, it is absorbed by the plate and, consequently, the optical power reflected by the plate is substantially lower than the optical power incident thereon. Examples of known optical attenuators are shown and described in U.S. Pat. No. 5,012,233 issued Apr. 30, 1991, and U.S. Pat. No. 5,079,710 issued Jan. 7, 1992. Known optical attenuators have been manufactured using a variety of different structures. One common structure includes a through-hole in a plate into which the light beam is incident. Another common structure includes a hollow fiber within the light path, disposed so that it is orthogonal to the light beam. A third known structure includes a through-hole formed in a pad having a thermoplastic material filled therein. The light beam is incident on the pad, which converts the incident light into heat, causing the thermoplastic material to solidify and form a solid opaque portion of the pad.

1. Field of the Invention The present invention relates generally to a medical probe for sensing a parameter, and more particularly, to a medical probe having a temperature-sensitive resistor and signal conditioner for use with such a temperature-sensitive resistor. 2. Description of the Related Art Thermal diagnostic probes for the detection of temperature changes in biological tissue are generally known and widely used in the medical arts, and one such probe is disclosed in U.S. Pat. No. 4,991,578. Such probes are used, for example, for measuring the temperature of biological tissue to determine whether or not tissue is cancerous or to predict the progress of cancerous tissue. Another such probe is
