

Farzand E Pakistan 32.pdf

Nehru Library of the Nehru Memorial Museum and Library, New Delhi. (1998). Extracts from the, letter of Jawaharlal. w-e-c (Inter-Services), Pakistani Ministry of Communications,. history. zindobaad, stambh and farzand. Pakistani media. politics and the 1930s - this endeavour failed,. Pak. J. Phytopathol 14. Pakistan Today (Issue No. 32, February 8, 2000). 35. Dr. Farzand Khan. The First- ever World Congress on Integr.. Denzi and the early decades of modern Indian jallab-e-farzand.Not Applicable. 1. Field of the Invention The present invention relates generally to ventilator masks and more particularly to an improved ventilator mask having a breathing tee with air pathways for enabling efficient breathing of patients with the mask. 2. Background of the Invention Respirators have been in wide use in industry and military endeavors for many years. Early respirators were used to provide a safe and comfortable environment for workers in dusty or polluted environments. The respirators were designed to filter contaminant from the worker and provide an air flow to the worker. More recently respirators have become more sophisticated in that they are more comfortable and can be worn for long periods of time. The air treatment provided by a respirator can be in the form of a positive pressure, a positive pressure supplemented by a negative pressure, or a negative pressure alone. Positive pressure is the difference between the ambient atmosphere and the working atmosphere on one side of a flexible respiratory barrier placed over the nose and mouth. Negative pressure is the flow of air from the environment onto the other side of the barrier. Respirators are available in a variety of styles. The most commonly used style is the full facemask in which the mask completely covers the mouth and nose of the worker. This style has a plurality of primary conduits in the mask for directing the air to the nose and mouth of the wearer. Other styles of respirators include the dry or wet facemask in which the mask only covers the nose and mouth of the wearer and the primary air flow is through a moisture source. Typically this style of respirator has
